

**TRIOS CYBER**  
**LABORATORY PRACTICE 26**

Incident Evidence Collection

---

**Name: Matthew Josue Portilla Morejon**

## 1. Laboratory Objective and Evidence Scope

This laboratory collected and organized supporting evidence for one suspicious authentication pattern observed on the monitored Windows endpoint. The evidence set was built to identify the affected endpoint and user, preserve timestamps and source details, retain relevant endpoint logs, correlate the activity in Wazuh, and organize screenshots and notes in a clear incident folder structure.

| Evidence item      | Observed value                          | Purpose / result                         |
|--------------------|-----------------------------------------|------------------------------------------|
| Suspicious pattern | Repeated failed authentication attempts | Pattern selected for evidence collection |
| Affected endpoint  | Windows-Agent / ID 002 / 10.10.20.30    | Monitored endpoint identified            |
| Affected user      | matthew                                 | Target account identified                |
| Relevant event     | Windows Security Event ID 4625          | Failed-logon evidence preserved          |
| Wazuh alert        | Rule 60122 / Level 5                    | Central alert classification             |
| Observed records   | 5 Wazuh hits                            | Repeated pattern confirmed               |

## 2. Incident Folder Structure

A dedicated Incident\_DAY26 directory was created with separate locations for endpoint data, logs, Wazuh evidence, screenshots, and analyst notes. This structure keeps the evidence separated by source while preserving a clear handoff path for review.

```
matthew@DESKTOP-VOJCDSO C:\Users\matthew>tree C:\Users\matthew\Documents\Incident_DAY26
Listado de rutas de carpetas
El número de serie del volumen es 000000D9 24ED:D5D1
C:\USERS\MATTHEW\DOCUMENTS\INCIDENT_DAY26
|___01_Endpoint
|___02_Logs
|___03_Wazuh
|___04_Screenshots
|___05_Notes
```

## 3. Affected Endpoint and User Evidence

Endpoint identification was preserved with hostname, whoami, and ipconfig outputs. A concise endpoint summary recorded Windows-Agent, agent ID 002, IP address 10.10.20.30, and the affected user matthew.

```
matthew@DESKTOP-VOJCDSO C:\Users\matthew>hostname > C:\Users\matthew\Documents\Incident_DAY26\01_Endpoint\hostname.txt

matthew@DESKTOP-VOJCDSO C:\Users\matthew>whoami > C:\Users\matthew\Documents\Incident_DAY26\01_Endpoint\user.txt

matthew@DESKTOP-VOJCDSO C:\Users\matthew>ipconfig > C:\Users\matthew\Documents\Incident_DAY26\01_Endpoint\ipconfig.txt

matthew@DESKTOP-VOJCDSO C:\Users\matthew>echo Affected endpoint: Windows-Agent > C:\Users\matthew\Documents\Incident_DAY26\01_Endpoint\endpoint_summary.txt

matthew@DESKTOP-VOJCDSO C:\Users\matthew>echo Agent IP: 10.10.20.30 >> C:\Users\matthew\Documents\Incident_DAY26\01_Endpoint\endpoint_summary.txt

matthew@DESKTOP-VOJCDSO C:\Users\matthew>echo Target user: matthew >> C:\Users\matthew\Documents\Incident_DAY26\01_Endpoint\endpoint_summary.txt

matthew@DESKTOP-VOJCDSO C:\Users\matthew>type C:\Users\matthew\Documents\Incident_DAY26\01_Endpoint\endpoint_summary.txt
Affected endpoint: Windows-Agent
Agent ID: 002
Agent IP: 10.10.20.30
Target user: matthew
```

## 4. Windows Security Log Collection

The Windows Security log was queried for Event ID 4625 records targeting matthew, and the matching records were redirected to Failed\_Logons\_4625.txt. The collected event data identifies the failed account logon, the target user, the local source, and authentication context needed to support the incident record.

```
matthew@DESKTOP-VOJCDSO C:\Users\matthew>wevtutil qe Security /q:"*[System[(EventID=4625)]] and *[EventData[Data[@Name='TargetUserName']='matthew']]" /rd:true /c:10 /f:text > C:\Users\matthew\Documents\Incident_DAY26\02_Logs\Failed_Logons_4625.txt
```

```
matthew@DESKTOP-VOJCDSO C:\Users\matthew>type C:\Users\matthew\Documents\Incident_DAY26\02_Logs\Failed_Logons_4625.txt

## 5. Native EVT X Preservation

The same failed-logon evidence was also preserved in native Windows Event Log format as Security\_4625\_matthew.evtx. The 02\_Logs directory therefore contains both a readable text export and the native EVT X evidence file.

## 6. Incident Summary Notes

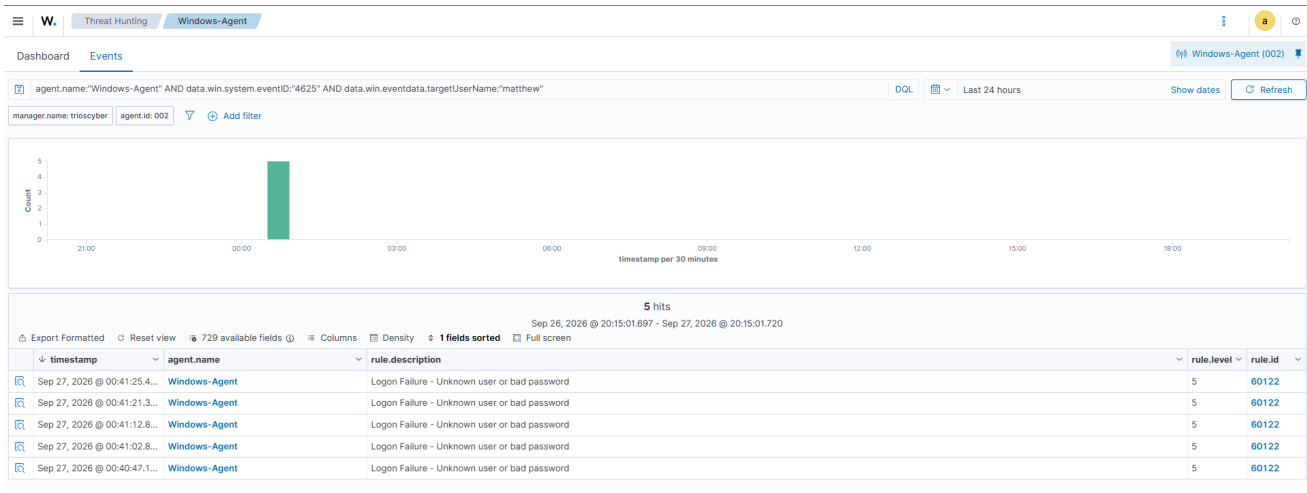

The incident notes consolidated the core evidence into a single summary: repeated failed authentication attempts, Windows-Agent, agent ID 002, IP 10.10.20.30, target user matthew, Windows Event ID 4625, source 127.0.0.1, logon type 3, NTLM authentication, failure reason, Wazuh rule 60122 at level 5, and five observed attempts.

Wazuh rule: 60122
Wazuh rule level: 5
Wazuh description: Logon Failure - Unknown user or bad password
Observed attempts: 5
```

## 7. Wazuh Correlation and Timeline

Threat Hunting was filtered to Windows-Agent, Event ID 4625, and targetUserName matthew. Wazuh returned five matching records, all classified as Logon Failure - Unknown user or bad password under rule 60122 at level 5. The results are clustered within roughly 00:40:47 to 00:41:25 on Sep 27, 2026, providing a concise timeline for the suspicious pattern.

## 8. Detailed Wazuh Event Evidence

Document Details identifies the reporting endpoint as Windows-Agent (ID 002, 10.10.20.30). The selected authentication failure records source address 127.0.0.1, source port 49833, logon type 3, NtLmSsp/NTLM authentication, target domain DESKTOP-VOJCDSO, and target user matthew.

| Document Details                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="#">View surrounding documents</a> | <a href="#">View single document</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

The Windows record is from the Security channel with Event ID 4625 and AUDIT\_FAILURE severity. Wazuh classifies the selected alert as rule 60122, level 5, description Logon Failure - Unknown user or bad password, in the authentication\_failed rule group. The selected alert shows timestamp Sep 27, 2026 @ 00:41:12.848; the filtered Threat Hunting view contains five total matching records.

## 9. Evidence Organization and Incident Index

The screenshot evidence was numbered and stored with descriptive filenames so each artifact can be traced to the corresponding collection step. A README\_DAY26.txt file was created as the incident index, summarizing the pattern, affected endpoint, user, source, Windows event, Wazuh rule, observed attempts, assessment, and the evidence inventory.

Incident\_DAY26

Text Docu

**INCIDENT EVIDENCE COLLECTION - DAY26**

Suspicious pattern:  
Repeated failed authentication attempts against the **matthew** account.

Affected endpoint:  
Windows-Agent

Agent ID:  
002

Agent IP:  
10.10.20.30

Affected user:  
**matthew**

Source:  
127.0.0.1

Relevant Windows event:  
SecurityEvent ID 4625

Authentication details:  
Logon type: 3  
Authentication package: NTLM  
Failure reason: Unknown user or bad password

Wazuh detection:  
Rule ID: 60122  
Rule level: 5  
Description: Logon Failure - Unknown user or bad password

Observed attempts:  
5

Assessment:  
Five failed authentication attempts against the same user were observed in a short period. The activity forms a brute-force-style pattern. In this laboratory, the activity was authorized and originated from the local endpoint (127.0.0.1), so no real incident escalation is required. In a production environment, an equivalent unexplained pattern should be investigated and potentially escalated.

Evidence collected:  
01. Incident folder creation  
02. Incident folder tree  
03. Endpoint identification summary  
04. Failed-logon export command  
05. Windows Event ID 4625 text evidence  
06. Windows Security event details  
07. Exported TXT and EVTX log files  
08. Incident evidence summary  
09. Wazuh Threat Hunting results showing 5 hits  
10. Wazuh source, agent and target-user details  
11. Wazuh Event ID 4625 details  
12. Wazuh rule, level and timestamp details

## 10. Validation Summary

| Requirement             | Collected evidence                                  | Status    |
|-------------------------|-----------------------------------------------------|-----------|
| Affected endpoint       | Windows-Agent / ID 002 / 10.10.20.30                | Verified  |
| Affected user           | matthew                                             | Verified  |

| Wazuh evidence          | 5 matching rule 60122 / level 5 alerts              | Verified  |
| Screenshots / structure | 12 named screenshots + organized incident folders   | Completed |

## 11. Conclusions

The incident evidence collection was completed successfully for the repeated failed-authentication pattern. The affected endpoint and user were identified, Windows Security Event ID 4625 evidence was preserved in both text and EVTX formats, source and authentication details were documented, and Wazuh correlated five matching failed-logon alerts from Windows-Agent. The supporting screenshots, notes, and incident index were organized into a clear evidence structure, satisfying the required collection of endpoint, user, timestamp, source, log, and screenshot evidence.
