

TRIOS CYBER

LABORATORY PRACTICE 21

Endpoint Event Collection Test and Wazuh Telemetry Verification

Name: Matthew Josue Portilla Morejon

1. Laboratory Objective and Environment

The Day 21 activity generated controlled Windows endpoint activity and verified the complete telemetry path from the local operating-system log to Wazuh. A temporary service named TriosLab21 was created on the monitored Windows endpoint, producing a Windows System event that could be correlated with the Wazuh alert and its source endpoint.

Element	Observed value	Purpose / result
Wazuh server	trioscyber / 10.10.20.10/24	Central collection and analysis platform
Windows endpoint	Windows-Agent / 10.10.20.30	Source endpoint monitored by Wazuh
Test activity	TriosLab21 service creation	Safe service-change telemetry for validation

2. Wazuh Server Readiness and Windows Agent Verification

Before generating the test event, the Wazuh server interface was restored to 10.10.20.10/24 and the indexer, manager, Filebeat, and dashboard were restarted. All four components returned active. On Windows, Get-Service confirmed that WazuhSvc was Running, establishing that both the collection server and endpoint agent were operational.

```
matthew@trioscyber:~$ sudo ip link set enp0s9 up
sudo ip addr flush dev enp0s9
sudo ip addr add 10.10.20.10/24 dev enp0s9

sudo systemctl restart wazuh-indexer
sleep 15
sudo systemctl restart wazuh-manager
sudo systemctl restart filebeat
sudo systemctl restart wazuh-dashboard
sleep 15

echo "===== WAZUH SERVICES ====="
sudo systemctl is-active wazuh-indexer
sudo systemctl is-active wazuh-manager
sudo systemctl is-active filebeat
sudo systemctl is-active wazuh-dashboard
[sudo] password for matthew:
===== WAZUH SERVICES =====
active
active
active
active
```

```
PS C:\Windows\system32> Get-Service WazuhSvc

Status      Name      DisplayName
-----
Running     WazuhSvc  Wazuh
```

3. Safe Endpoint Activity Generation

A temporary Windows service named TriosLab21 was created with sc.exe. The command returned CreateService CORRECTO, confirming that the permitted service-change activity was generated successfully for the collection test.

```
matthew@DESKTOP-VOJCD50 C:\Users\matthew>sc.exe create TriosLab21 binPath= "C:\Windows\System32\cmd.exe /c exit" start= demand
[SC] CreateService CORRECTO
```

4. Local Windows Event Verification

The Windows System log was queried for Event ID 7045. The matching record was generated at 20:44:40 by Service Control Manager and identified TriosLab21, the image path C:\Windows\System32\cmd.exe /c exit, demand start, and the LocalSystem account. This confirmed that the endpoint produced the expected local telemetry before Wazuh correlation.

```
matthew@DESKTOP-VOJCD50 C:\Users\matthew>powershell.exe -NoProfile -Command "Get-WinEvent -FilterHashtable @{LogName='System';Id=7045} -MaxEvents 10 | Where-Object {$_.Message -match 'TriosLab21'} | Select-Object -First 1 | Format-List TimeCreated,Id,ProviderName,Message"

TimeCreated : 22/9/2026 20:44:40
Id          : 7045
ProviderName : Service Control Manager
Message     : Se instaló un servicio en el sistema.

Nombre del servicio: TriosLab21
Nombre del archivo del servicio: C:\Windows\System32\cmd.exe /c exit
Tipo de servicio: servicio de modo usuario
Tipo de inicio de servicio: inicio por solicitud
Cuenta de servicio: LocalSystem
```

5. Wazuh Telemetry Reception and Source Identification

The corresponding Wazuh document identified the source as Windows-Agent (agent ID 002) at 10.10.20.30. The event arrived from the System channel with Event ID 7045 and Service Control Manager as the provider. The event data preserved the TriosLab21 service name and the same command path observed locally.

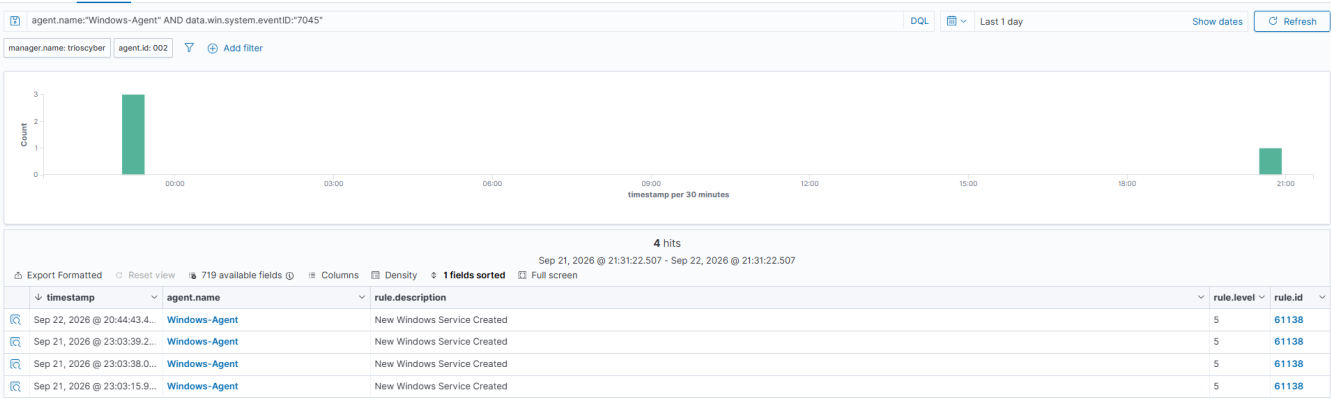

Wazuh classified the activity as New Windows Service Created using rule 61138 at level 5. The alert was mapped to MITRE ATT&CK technique T1543.003 (Windows Service), with Persistence and Privilege Escalation tactics. The manager field identified trioscyber, confirming that the event reached the central Wazuh platform.

6. Threat Hunting Validation

Threat Hunting was filtered with agent.name:"Windows-Agent" and data.win.system.eventID:"7045". The results contained the newly generated event together with previous matching service-creation records. The current Day 21 event appeared as New Windows Service Created with rule level 5 and rule ID 61138, demonstrating that relevant endpoint telemetry was searchable in Wazuh.

7. Laboratory Cleanup

After the event had been validated, the temporary service was removed with sc.exe delete TriosLab21. DeleteService CORRECTO confirmed that the endpoint was returned to its prior laboratory state.

```
matthew@DESKTOP-VOJCDSO C:\Users\matthew>sc.exe delete TriosLab21
[SC] DeleteService CORRECTO
```

8. Event Collection Summary

Field	Observed value	Interpretation
Endpoint	Windows-Agent / ID 002 / 10.10.20.30	Source endpoint identified
Local event	System / Event ID 7045	Service installation telemetry generated
Service	TriosLab21	Controlled Day 21 activity
Provider	Service Control Manager	Windows event source
Wazuh rule	61138 / level 5	New Windows Service Created
MITRE ATT&CK	T1543.003 - Windows Service	Persistence / Privilege Escalation mapping
Cleanup	DeleteService CORRECTO	Temporary service removed

9. Conclusions

The Endpoint Event Collection Test was completed successfully. A controlled Windows service change generated Event ID 7045 locally, and Wazuh received the same telemetry from Windows-Agent at 10.10.20.30. Wazuh correlated the event as New Windows Service Created with rule 61138 and MITRE ATT&CK T1543.003. The temporary TriosLab21 service was then deleted, completing the test while leaving the endpoint clean.
